

With proprietary double-layered construction, Dri-Balance™ fabric ensures a cool, dry and comfortable feeling, keeping you ahead of the game.

Our textile engineers crafted an intricate knit structure that optimizes moisture transport and dispersion within the cotton layer, allowing air to flow inward and cool the skin. Every Dri-Balance™ fabric features two layers: a 100% microfiber polyester layer against the skin, plaited to a 100% combed cotton surface. This design ensures moisture is instantly transferred from the skin to the cotton, keeping the wearer dry and cool.
